SUMMARY

Full-stack developer at Gendee.ai, building two production platforms in parallel: an AI content generation platform and a news service on web and mobile. I own features end to end — the PostgreSQL schema and access rules, then the API, then the screens on top. Software Engineering graduate, Second Class Honors, and first author of a peer-reviewed IEEE conference paper.

TECHNICAL SKILLS

Languages: TypeScript, JavaScript, Go, Java, SQL

Frontend: Angular, Next.js, React, Ionic, Tailwind CSS, Flutter

Backend: Supabase (Edge Functions), Go (Fiber), Node.js (Express), Spring Boot, REST APIs

Database: PostgreSQL, MSSQL, MySQL

Tools: Git, GitHub, Firebase (FCM), Swagger, Postman, Figma, Chart.js

PROFESSIONAL EXPERIENCE

Junior Full-Stack Developer — Gendee.ai, Bangkok, Thailand

Full-time, On-site | June 2026 – Present

Two products in parallel: Gendee.ai, an AI content generation platform, and CIRCLE, a news service. 306 commits across 7 repositories. Live: <https://gendee.ai> and <https://circle-th.com>

- Built Gendee for Business: organizations on one credit wallet, owner/admin/member roles, live per-member quotas, invites and org-billed top-ups, plus the operations console.
- Delivered the course platform: catalog, enrolment rounds, checkout against a live payment provider, expiring seat holds and the classroom.
- Implemented push notifications: database triggers fanning out to Firebase Cloud Messaging, tokens deduplicated per install, an in-app centre.
- Wrote most of the CIRCLE web app from an empty repository: Next.js 16 App Router, TanStack Query, rewards, web push and support tickets.
- Connected the CIRCLE reader app (Ionic + Capacitor) and its editorial desk to the backend, then collapsed the news schema through the rebrand.
- Technologies: Angular, Next.js, Ionic, Capacitor, TypeScript, Deno, Supabase, PostgreSQL, Firebase.

Full Stack Developer Intern — Mae Fah Luang Foundation under Royal Patronage, Bangkok

DoiTung Development Project | January 2026 – April 2026 | Project: MyTissue, internal wood inventory management system

- Built the system that tracks client wood inventory through every processing stage, with multi-step workflows kept transactionally consistent.
- Designed and implemented the production RESTful APIs in Go (Fiber), and the responsive Next.js front end used daily by operations staff.
- Tuned MSSQL queries and constraints for query performance and data consistency.
- Technologies: Next.js, Go (Fiber), MSSQL.

EDUCATION

Bachelor of Engineering in Software Engineering

Mae Fah Luang University, School of Applied Digital Technology | Graduated June 2026

Second Class Honors. GPAX 3.27.

SELECTED PROJECT

DoiTung Waste Management System — Senior Project

Mae Fah Luang University | <https://github.com/6531503060-nipeerawut>

- Web system for community waste collection and recycling, surfacing waste generation patterns so collection can be planned instead of guessed.
- Became the basis for a peer-reviewed IEEE conference paper.
- Technologies: React, Node.js (Express), MySQL.
