

PEERAWUT NIPAKORNPAN

Junior Full-Stack Developer

Full-stack developer at **Gendee.ai**, building two production platforms in parallel: an AI content generation platform and a news service on web, mobile and an editorial desk. I own features end to end — the PostgreSQL schema and access rules, then the API, then the screens on top. Software Engineering graduate, Second Class Honors, first author of a peer-reviewed IEEE paper.

EDUCATION

B.Eng. Software Engineering

Mae Fah Luang University
School of Applied Digital Technology
Graduated June 2026

Second Class Honors · GPAX 3.27

TECHNICAL SKILLS

Languages: TypeScript, JavaScript, Go, Java, SQL
Frontend: Angular, Next.js, React, Ionic, Tailwind CSS, Flutter
Backend: Supabase (Edge Functions), Go (Fiber), Node.js (Express), Spring Boot
Database: PostgreSQL, MSSQL, MySQL
Tools: Git, GitHub, Firebase (FCM, Hosting), Swagger, Postman, Figma, Chart.js

PUBLICATION

Implementation of an Integrated Waste Management System: A Case Study of the Doi Tung Development Project

First author — Peerawut Nipakornpan, et al.
IEEE International Conference Proceedings, 2026
ieeexplore.ieee.org/document/11460046

LANGUAGE SKILLS

Thai — Native
English — Intermediate

WORK EXPERIENCE

Junior Full-Stack Developer

Jun 2026 – Present

Gendee.ai — Bangkok, Thailand · Full-time, On-site

Two products in parallel: **Gendee.ai**, an AI content generation platform, and **CIRCLE**, a news service. 306 commits across 7 repositories.

- Built **Gendee for Business**: organizations on one credit wallet, owner/admin/member roles, live per-member quotas, invites and org-billed top-ups, plus the operations console.
- Delivered the **course platform**: catalog, enrolment rounds, checkout against a live payment provider, expiring seat holds and the classroom.
- Implemented **push notifications**: database triggers fanning out to Firebase Cloud Messaging, tokens deduplicated per install, an in-app centre.
- Wrote most of the **CIRCLE web app** from an empty repository: Next.js 16 App Router, TanStack Query, rewards, web push and support tickets.
- Connected the **CIRCLE reader app** (Ionic + Capacitor) and its editorial desk to the backend, then collapsed the news schema through the rebrand.

Stack: Angular · Next.js · Ionic · Capacitor · TypeScript · Deno · Supabase · PostgreSQL · Firebase

Live: gendee.ai · circle-th.com

Full Stack Developer Intern

Jan 2026 – Apr 2026

Mae Fah Luang Foundation under Royal Patronage — DoiTung Development Project, Bangkok

Project: **MyTissue** — internal wood inventory management system.

- Built the tracking of client wood inventory through every processing stage, keeping multi-step workflows transactionally consistent.
- Designed and implemented the production RESTful APIs in Go (Fiber), and the responsive Next.js front end used daily by operations staff.
- Tuned MSSQL queries and constraints for performance and data consistency.

Stack: Next.js · Go (Fiber) · MSSQL

SELECTED PROJECT

DoiTung Waste Management System

Senior Project

Mae Fah Luang University

- Web system for community waste collection and recycling, surfacing waste generation patterns so collection can be planned instead of guessed.
- Basis for the IEEE paper listed under Publication.

Stack: React · Node.js (Express) · MySQL
