

PEERAWUT NIPAKORNPAN

Junior Full-Stack Developer

Full-stack developer at **Gendee.ai**, building two production platforms in parallel: an AI content generation platform and a digital news app. I own features end to end — the PostgreSQL schema and access rules, then the API, then the screens on top. Software Engineering graduate with Second Class Honors and first author of a peer-reviewed IEEE conference paper.

EDUCATION

B.Eng. Software Engineering

Mae Fah Luang University
School of Applied Digital Technology
Graduated June 2026

Second Class Honors · GPAX 3.27

TECHNICAL SKILLS

Languages: TypeScript, JavaScript, Go, Java, SQL
Frontend: Angular, React, Next.js, Ionic, Flutter, Tailwind CSS
Backend: Go (Fiber), Node.js (Express), Spring Boot, Deno Edge Functions, REST APIs
Database: PostgreSQL, MSSQL, MySQL, Supabase
Tools: Git, GitHub, Swagger, Postman, Figma, Firebase Cloud Messaging

PUBLICATION

Implementation of an Integrated Waste Management System: A Case Study of the Doi Tung Development Project

First author — Peerawut Nipakornpan, et al.
IEEE International Conference Proceedings, 2026
ieeexplore.ieee.org/document/11460046

LANGUAGE SKILLS

Thai — Native
English — Intermediate

WORK EXPERIENCE

Junior Full-Stack Developer

Jun 2026 – Present

Gendee.ai — Bangkok, Thailand · Full-time, On-site

Two products in parallel: **Gendee.ai**, an AI content generation platform, and **CIRCLE**, a digital news app. 218 commits across 6 repositories.

- Shipped three systems end to end — B2B organizations, courses and notifications — each from PostgreSQL schema and access rules, through Deno edge APIs, to the Angular UI.
- Built Gendee for Business: shared credit pools, per-member usage limits, invite flows and the admin console behind them.
- Delivered the course platform: catalog, checkout, payment and classroom views, plus a staff console.
- Implemented push notifications: database triggers fanning out to Firebase Cloud Messaging, with an in-app notification centre.
- Connected the CIRCLE reader app (Ionic + Capacitor) and its editorial desk to the backend, and simplified the news schema through the BCC24 to CIRCLE rebrand.

Stack: Angular · Ionic · TypeScript · Deno · Supabase · PostgreSQL · Firebase

Live: gendee.ai · circle-th.com

Full Stack Developer Intern

Jan 2026 – Apr 2026

Mae Fah Luang Foundation under Royal Patronage — DoiTung Development Project, Bangkok

Project: **MyTissue** — internal wood inventory management system.

- Built the tracking of client wood inventory through every processing stage, keeping multi-step workflows transactionally consistent.
- Designed and implemented RESTful APIs in Go (Fiber) running in production.
- Built the responsive Next.js front end used daily by operations staff.
- Tuned MSSQL queries and constraints for performance and data consistency.

Stack: Next.js · Go (Fiber) · MSSQL

SELECTED PROJECT

DoiTung Waste Management System

Senior Project

Mae Fah Luang University

- Web system for community waste collection and recycling, surfacing waste generation patterns so collection can be planned instead of guessed.
- Basis for the peer-reviewed IEEE paper listed under Publication.

Stack: React · Node.js (Express) · MySQL
