

Peerawut Nipakornpan

Junior Full-Stack Developer

Phone: +66 91 872 1064 | Email: nipeerawutdev15@gmail.com | Location: Bangkok, Thailand

Portfolio: <https://portfolio-offpeerawut.vercel.app> | LinkedIn: <https://linkedin.com/in/peerawut-nipakornpan-3550a131a> | GitHub: <https://github.com/6531503060-nipeerawut>

SUMMARY

Full-stack developer at Gendee.ai, building two production platforms in parallel: an AI content generation platform and a digital news app. I own features end to end — the PostgreSQL schema and access rules, then the API, then the screens on top. Software Engineering graduate, Second Class Honors, and first author of a peer-reviewed IEEE conference paper.

TECHNICAL SKILLS

Languages: TypeScript, JavaScript, Go, Java, SQL

Frontend: Angular, React, Next.js, Ionic, Flutter, Tailwind CSS

Backend: Go (Fiber), Node.js (Express), Spring Boot, Deno, Edge Functions, REST APIs

Database: PostgreSQL, MSSQL, MySQL, Supabase

Tools: Git, GitHub, Swagger, Postman, Figma, Chart.js, Firebase Cloud Messaging

PROFESSIONAL EXPERIENCE

Junior Full-Stack Developer — Gendee.ai, Bangkok, Thailand

Full-time, On-site | June 2026 – Present

Two products in parallel: Gendee.ai, an AI content generation platform, and CIRCLE, a digital news app. 218 commits across 6 repositories. Live: <https://gendee.ai> and <https://circle-th.com>

- Shipped three systems end to end — B2B organizations, a course platform and notifications — each from PostgreSQL schema and access rules, through Deno edge APIs, to the Angular interface.
- Built Gendee for Business: shared credit pools, per-member usage limits and invite flows, plus the admin console and operations dashboard behind them — redeem codes, organizations and reporting.
- Delivered the course platform: catalog, checkout, payment and classroom views, with a staff console behind it.
- Implemented push notifications: database triggers fanning out to Firebase Cloud Messaging, with an in-app notification centre.
- Connected the CIRCLE reader app (Ionic + Capacitor) and its editorial desk to the backend, then simplified the news schema during the BCC24 to CIRCLE rebrand.
- Kept the details honest: mobile layouts, multi-language copy, accessibility, tests and handover docs.
- Technologies: Angular, Ionic, Capacitor, TypeScript, Deno, Supabase, PostgreSQL, Chart.js, Firebase Cloud Messaging.

Full Stack Developer Intern — Mae Fah Luang Foundation under Royal Patronage, Bangkok

DoiTung Development Project | January 2026 – April 2026 | Project: MyTissue, internal wood inventory management system

- Built the system that tracks client wood inventory through every processing stage, with multi-step workflows kept transactionally consistent.
- Designed and implemented the production RESTful APIs in Go (Fiber), and the responsive Next.js front end used daily by operations staff.
- Tuned MSSQL queries and constraints for query performance and data consistency.
- Technologies: Next.js, Go (Fiber), MSSQL.

EDUCATION

Bachelor of Engineering in Software Engineering

Mae Fah Luang University, School of Applied Digital Technology | Graduated June 2026

Second Class Honors. GPAX 3.27.

SELECTED PROJECT

DoiTung Waste Management System — Senior Project

Mae Fah Luang University | <https://github.com/6531503060-nipeerawut>

- Web system for community waste collection and recycling, surfacing waste generation patterns so collection can be planned instead of guessed.
- Became the basis for a peer-reviewed IEEE conference paper.
- Technologies: React, Node.js (Express), MySQL.
